

BAR-BAR-A EQUIPMENT COMPANY

FOR IMMEDIATE RELEASE:

Bar-Bar-A Equipment Co. Introduces a Self-Cleaning Horse & Cattle Waterer

Farmington, UT July 26, 2004 – Bar-Bar-A Equipment Co., maker of Bar-Bar-A Horse Drinkers, today introduced a new component to its horse waterers that enables their systems to be self-cleaning. The component allows the unit to clean itself every time an animal requests water.

This added component is anticipated to be a major improvement in the industry. All other automatic waters require the owner to periodically clean the system. This takes time and effort and before the unit is cleaned the water becomes unclean and undesirable to the animal. This breakthrough means no algae or mold build-up in the Drinker and healthier water for animals.

Bar-Bar-A Equipment Company is a Utah based company, with origins stemming from a 1982 experience the inventor had with his horse being repeatedly shocked by an electrically heated watering unit. The experience was later conceptualized with one of the country's first non-electric, automatic waterers. Since then the company's vision has been to create products that are friendly to animals and the environment.
